Climate News From NASA Features Work by UCSB Researcher

Zhengming Wan, researcher at the Institute for Computational Earth Systems Science at the University of California, Santa Barbara, developed a method to determine the surface temperature of the Earth using data from NASA. The results show an unusually warm, dry U.S. winter. The attached news release from NASA, with images, can be accessed at (http://earthobservatory.nasa.gov/Newsroom/archive.php?m=01&y=2002&cat_i...).

About UC Santa Barbara

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. All of this takes place within a living and learning environment like no other, as we draw inspiration from the beauty and resources of our extraordinary location at the edge of the Pacific Ocean.
