UCSB Geologist Wins National Science Foundation Award

David L. Valentine, assistant professor of geological sciences, has been awarded a National Science Foundation CAREER award. He is the fifth UCSB faculty member to receive the award this year.

The estimated total amount of the award is \$620,300 for five years for his proposal entitled "CAREER: Microbial Geochemistry of Natural Marine Gas Seeps---A Research and Education Plan."

The Faculty Early Career Development (CAREER) Program offers the National Science Foundation's most prestigious awards in support of the early career development activities of those teacher-scholars who are most likely to become the academic leaders of the 21st century.

NSF explains that CAREER awardees are selected on the basis of creative proposals that effectively integrate research and education within the context of the mission of their organization. The plans are expected to build a firm foundation for a lifetime of integrated contributions to research and education.

The other UCSB recipients of the NSF CAREER award for 2005 are: Jeffrey W. Bode, Patrick S. Daugherty, Ram Seshadri, and Timothy P. Sherwood.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for

research and education in the sciences, mathematics, and engineering.

About UC Santa Barbara

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. All of this takes place within a living and learning environment like no other, as we draw inspiration from the beauty and resources of our extraordinary location at the edge of the Pacific Ocean.
