Three UCSB Professors Elected to the American Academy of Arts and Sciences

University of California, Santa Barbara professors Joseph H. Connell, Reginald G. Golledge, and Galen Stucky have been elected fellows of the prestigious American Academy of Arts and Sciences, the Academy announced Wednesday.

Connell is a research professor of ecology, evolution, and marine biology. Golledge is a professor of geography. Stucky is a professor of chemistry. The three were included in the AAAS's 2005 class, which includes 196 new fellows and 17 new foreign honorary members.

Their election brings the number of UCSB faculty elected AAAS fellows to 21.

AAAS fellows come from throughout the arts and sciences and are nominated and elected to the Academy by current members. A broad-based membership gives the Academy, which was founded in 1780, a unique capacity to conduct a wide range of interdisciplinary studies and public policy research.

Among those joining Connell, Golledge, and Stucky in the Class of 2005 are Nobel Prize-winning physicist Eric Cornell, Supreme Court Justice William Rehnquist, actor and director Sidney Poitier, journalist Tom Brokaw, Google co-founders Sergey Brin and Larry Page, Vietnam Veteran's Memorial designer Maya Lin and Pulitzer Prize-

winning writers Horton Foote, Tony Kushner, and Alison Lurie.

Connell, who joined the UCSB faculty in 1956, specializes in the study of the ecology of tropical rain forests and coral reefs.

Golledge, who came to UCSB in 1977 and lost his sight in the early 1980s, is an expert in navigation systems for the visually impaired.

Stucky joined UCSB's Department of Chemistry in 1985 and is working to design and synthesize new materials.

The Academy will welcome this year's new Fellows and Foreign Honorary Members at its annual induction ceremony on October 8, at the Academy's headquarters in Cambridge, Massachusetts.

About UC Santa Barbara

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. All of this takes place within a living and learning environment like no other, as we draw inspiration from the beauty and resources of our extraordinary location at the edge of the Pacific Ocean.
