UCSB Researcher Receives National Science Award

John Alroy, associate researcher at UC Santa Barbara's National Center for Ecological Analysis and Synthesis (NCEAS), has been named the winner of the National Academy of Sciences' Award for Scientific Reviewing.

The NAS press release states that Alroy is being honored for developing The Paleobiology Database, which has produced an extraordinarily extensive synthesis of paleontological data that has been driving the field of paleobiology forward in ways that would have been previously impossible. The prize of \$10,000 -- given this year in the field of geosciences -- recognizes excellence in scientific reviewing.

Alroy will soon move to Australia's Macquarie University to take a fellowship. Macquarie notes that The Paleobiology Database is the Internet's key source of scientific data on the fossil record. It records names and classifications of fossil organisms and ages, and locations and environments of the places that yield these fossils. Macquarie University will house the database as it expands to record evolutionary relationships of many species. This information will help to estimate dates of origin for major groups such as mammals and birds.

Alroy, who has been with NCEAS since 1998, completed his B.A. in biology at Reed College, and his M.S. and Ph.D. in evolutionary biology at the University of Chicago.

An awards ceremony for recipients will take place on April 25th, during the Academy's annual meeting in Washington, D.C.

About UC Santa Barbara

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. All of this takes place within a living and learning environment like no other, as we draw inspiration from the beauty and resources of our extraordinary location at the edge of the Pacific Ocean.
