## **Conference at UCSB Examines Environmental and Resource Economics**

Economic and environmental scholars from universities across the United States, Canada, and Europe will gather at UC Santa Barbara for the 11th Occasional Workshop on Environmental and Resource Economics on October 9-10. The workshop presentations are free and open to the public.

The two-day conference, which begins at 8 a.m. on Friday, October 9, will take place at the campus's Corwin Pavilion. The conference organizers are Robert Deacon and Paulina Oliva, professors of economics at UCSB, and Julian Neira, a graduate student in the economics department at UCSB. Questions about the workshop can be directed to Neira at [neira@econ.ucsb.edu](mailto:neira@econ.ucsb.edu).

Focused on faculty members and researchers at universities, public and private institutes, and government agencies involved in research in environmental and natural resource economics, the program will give participants an opportunity to share findings from their research. Individual sessions will address issues related to economic aspects of climate change; theoretical contributions to environmental policy; transportation and environmental policy; econometric innovations; renewable resource management; and political economy, macroeconomics, and the environment.

"It has been very gratifying to see how interest in this event has risen over the years," said Deacon. "Many of the profession's most prominent scholars will be presenting new, unpublished findings on the design of policies to respond to the growing challenges of environmental and natural resource management."

The conference is made possible in part by a grant from the U.S. Environmental Protection Agency and is sponsored by UCSB's Department of Economics and Bren School of Environmental Science & Management.

## **About UC Santa Barbara**

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. All of this takes place within a living and learning environment like no other, as we draw inspiration from the beauty and resources of our extraordinary location at the edge of the Pacific Ocean.
